<sup>1)</sup> FSK = frequency shift keying

The analogue data transmitter MK35-11Ex-HLi/24VDC is designed to isolate and transmit standard current signals from the safe to the hazardous area. Signals are transferred without attenuation (1:1 transfer).

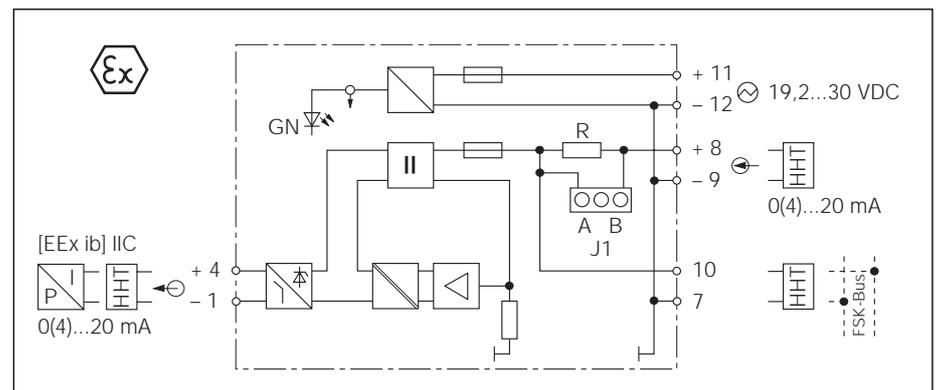

A power supply of 24 VDC is required for operation.

In addition to analogue signals, digital Hart communication signals can be transferred bidirectionally.

The device is typically used to drive I/P transducers (e.g. for valve control) or display devices in the hazardous area.

The actuator is connected to terminals 1/4. Handheld terminals [HHT] can be connected to output terminals 1/4, input terminals 8/9 or to the FSK bus terminals 7/10.
